

### Why THREE Collagene is highly recommended by a professional nutritionist

We don't usually find collagen products in the market that dare to claim as micronized collagen.

Micronized collagen is having very small molecular size in which it can be directly adsorbed into our body cells as the original collagen form, without the need of further breakdown into amino acid by our body.

Amino acid is no longer the collagen form and thus no guarantee that it will do the job of the collagen as we originally intended.

The collagen that we normally found in the market are hydrolyzed collagen or collagen peptides, in which the size of the molecules are questionable. It will usually be further breakdown by our body into amino acid and thus, as mentioned above, there's no guarantee that it can be absorbed directly into the body cells as the original collagen form and do the work of the collagen.

---

THREE Collagene is highly recommended by professional nutritionist because:

- micronized collagen
- <1000 molecular weight
- Pro-Hyp
- pharmaceutical grade
- listed in PDR.net

<b>Supplement Facts</b>

Hi Danyelle,

Thanks for reaching out to THREE Science.

The collagen peptides in Collagène are below 1000 molecular weight in the Pro-Hyp form and are readily absorbed into the body—as the attached paper shows.

Be well,

**Three Science Team**

THREE™

A good collagen must be either one of the below in order for body to adsorb:

- prolyl hydroxyproline (Pro-Hyp)
- hydroxyprolyl-glycine (Hyp-Gly)
- the size <1000da

Our THREE Collagene fulfilled two of the above instead of just one. So that means our collagen is super high quality.
